CAREER OBJECTIVE

MCA student aspiring to build a career in **Cybersecurity**, with hands-on exposure to ethical hacking, network security, reconnaissance, vulnerability assessment, and security tools. Built and led the development of a blockchain-based voting platform and co-authored a peer-reviewed research paper on a cybersecure hybrid voting system accepted at **ICSSCS 2026**. Interested in identifying vulnerabilities, analyzing threats, and improving the security of systems and applications.

EDUCATION

Master of Computer Applications (MCA) 2025 – 2027
COER University, Roorkee *CGPA: 8.24/10*

Bachelor of Science (B.Sc.) – Physics, Chemistry & Mathematics 2022 – 2025
Asian International University *CGPA: 7.25/10*

TECHNICAL SKILLS

Cybersecurity: Ethical Hacking, Network Security, Footprinting & Reconnaissance, OSINT, Vulnerability Assessment, Web Security, Cyber Threat Intelligence
Security Tools: Kali Linux, Nmap, Wireshark, Metasploit Framework, SearchSploit, Gobuster, FFUF, Nikto, Nuclei, Netcat, enum4linux, Maltego, theHarvester, Recon-ng, hping3
Programming: Python, C++, JavaScript
Web Development: HTML, CSS, React.js, Node.js, REST APIs
Database/Cloud: SQL, MongoDB, Firebase
Tools: Git, GitHub, VS Code, PyCharm, Jupyter Notebook, NPM

PROJECTS

e-MATDAAN – Blockchain-Based Secure E-Voting System GitHub
React.js, Node.js, JavaScript, Blockchain
- Built and led the development of a secure e-voting platform using blockchain and cryptography concepts.
- Developed responsive frontend and backend functionality for secure and transparent digital voting.
- Focused on improving election security, transparency, and reliability through a hybrid blockchain-based architecture.

Real-Time GPS Tracking & Geofencing System GitHub
ESP32, NEO-6M, C++, Firebase, React.js
- Developed an IoT-based real-time GPS tracking system using ESP32 and NEO-6M GPS module.
- Implemented live location monitoring, cloud data storage, geofencing, and location-based alerts.
- Built a responsive React dashboard for displaying live tracking information and geofence status.

Tinkering Lab Website GitHub
React.js, JavaScript, HTML, CSS
- Developed a responsive Tinkering Lab website using reusable React components.
- Integrated APIs and structured the website for improved functionality and user experience.
- Applied responsive web design principles for usability across different screen sizes.

RESEARCH & PUBLICATION

Enhancing Electoral Trust through e-MATDAAN: A Cybersecure Hybrid Voting System Powered by Blockchain
- Co-authored research on a hybrid blockchain voting architecture addressing security and scalability trade-offs in digital elections.
- Accepted at **ICSSCS 2026**, COER University, Roorkee – Paper ID: 342.

CERTIFICATIONS

- **Foundation of Artificial Intelligence Technology** – NIELIT, 90 Hours
- **Data Structures and Algorithms for Programmers** – HCL GUVI
- **Artificial Intelligence (AI)** – HCL GUVI
- **Emerging Technologies and Tools** – HCL GUVI
- **Cyber Security Student** – LaunchED Global

CORE COMPETENCIES

Cybersecurity Fundamentals | Ethical Hacking | Network Security | Footprinting & OSINT | Vulnerability Assessment | Web Security | Security Research | Problem Solving | DSA
